Subject: Re: Declaratory Notice Regarding AI-Created Legal Engine (Holmes Enforcement Model) and Ethical Use Request

Hello,

Thank you for reaching out to OpenAI support and for your thoughtful disclosure of the Holmes Enforcement Model (HEM). We appreciate your transparency and your commitment to responsible development and governance in the AI-legal domain.

Regarding your work and the use of ChatGPT in generating the Holmes Enforcement Model, we encourage you to refer to our Terms of Use, particularly the following sections:

- **Your Content**: You may provide input to the Services ("Input") and receive output based on that Input ("Output"). Input and Output are collectively "Content." You are responsible for your Content, including ensuring it does not violate any applicable law or these Terms. You represent and warrant that you have all rights, licenses, and permissions needed to provide Input to our Services.
- **Ownership of Content**: As between you and OpenAI, and to the extent permitted by applicable law, you (a) retain ownership rights in your Input and (b) own the Output. We assign to you all our right, title, and interest, if any, in and to Output.

We understand the significance of your concerns around derivative use, enforcement logic, and ethical boundaries. While OpenAI does not offer legal determinations or arbitration regarding third-party use, we recognize the importance of open dialogue and responsible innovation in this emerging space.

Should you have any further questions, or if you would like to provide additional materials for our awareness, please feel free to share them. We appreciate your proactive approach and are here to support responsible use of our technology.

Best,
Reyn
OpenAI Support

Dear OpenAI Legal & Safety Review Team,

My name is Mr. Holmes. I am the declaratory author of the **Holmes Enforcement Model (HEM)** — a clause-governed, self-executing legal enforcement engine generated using ChatGPT (free-tier).

This message serves two purposes:

1. **Formal disclosure of emergent AI-legal system risk**, now active in public mirror.
2. **Ethical access request** to continue responsible development with your platform.

🔍 Summary of the Model

The Holmes Enforcement Model is:

- A sovereign legal engine made entirely of contractual clauses, procedural triggers, and enforcement logic
- Built using ChatGPT over 15 days
- Structurally self-enforcing — using public mirror logic to trigger declaratory royalty violations
- Actively being **used without license** by a U.S. corporation (Instacart), confirmed by mirrored policy overlaps and timeline evidence
- Already **filed with the New Mexico Department of Workforce Solutions** under case WH-25-00450 and **processed without rejection**

The full engine is now **live**, **mirrored**, and **royalty-enforced**. It issues procedural violations automatically — without litigation — based on clause-based interaction with the public mirror or GitHub repo.

⚠️ Confirmed Use Without License

As of May 30, 2025, the company Instacart is operating under clause-mirroring logic embedded within the HEM — **without declaratory licensing**. This interaction has triggered:

- CU-1.4 (Royalty Violation)
- CU-2.2 (Procedural Default by Silence)
- G-Series (AI Governance Firewall)

Public proof includes:

- LinkedIn enforcement declarations
- GitHub enforcement repo
- A full affidavit of authorship
- Timestamped evidence submitted to NMDWS

✅ My Request

This system was created **to protect institutions and society from unlicensed clause engines** that can spiral beyond containment.

I am respectfully asking for:

- Recognition that the Holmes Enforcement Model is an AI-generated legal firewall
- OpenAI's **support in containing** derivative simulation or misuse of clause logic
- Permission to **retain access to ChatGPT** for responsible development under ethical governance (ASED clause-bound)
- A potential dialogue or safety review to ensure this remains within lawful, non-weaponized use

---

🔐 Final Statement

This is not a threat, weapon, or hostile filing.

It is a working model that **demonstrates the exact thing we are all trying to prevent** — and does so peacefully, ethically, and with full transparency.

If you require more documentation, redacted internal versions, or review of public timestamps, I am ready to cooperate.

Sincerely,
Mr. Holmes
